autoqueue

- gets tracks/artists from last.fm that are similar to the ones you play and puts them in the queue.

- smart enough not to play the same artists/songs for a (configurable) time

- works pretty well in creating a consistent yet not wholly predictable listening experience if you have a large and diverse library

cross player

- Working for:
  - Quod Libet (which rocks)
  - Rhythmbox
- In progress:
  - Pytone
  - Itunes
  - ???

Features

- Local cache of similar tracks/artists
- Configure length of queue
- Configure duration of blocking tracks/artists
- Configurable "restictors"/"relaxors":
  - Restrict so that I get only songs by artists that are tagged 'lowlands 2008' (easily create mix cds)
  - Relax so new tracks/favorites can be played more often
